Appln. No. 10/814,987   Attorney Docket No. 10541-2004

I.   Amendments to the Claims   **RECEIVED**
                                              CENTRAL FAX CENTER
        1.   (Cancelled).
                                                AUG 0 8 2008

        2.   (Previously Presented): The system according to claim 23, wherein the text-to-speech generator is configured to randomly select a template from the plurality of predetermined templates.

        3.   (Previously Presented): The system according to claim 23, wherein the text-to-speech generator is configured to select a template from the plurality of predetermined templates based on a counter.

        4.   (Previously Presented): The system according to claim 23, wherein the text-to-speech generator is configured to select a template from the plurality of predefined templates based on the transmission information.

        5.   (Original): The system according to claim 4, wherein the text-to-speech generator is configured to select a template from the plurality of predefined templates based on artist information in the transmission information.

        6.   (Previously Presented): The system according to claim 23, wherein the text-to-speech generator is configured to determine if artist information is in the transmission information and to determine if the artist information is plural.

-2-

7.   (Previously Presented): The system according to claim 23, wherein the transmission information includes next up information, and the text-to-speech generator selects the template based on the next up information.

8.   (Previously Presented): The system according to claim 23, wherein the text-to-speech generator is configured to add phrases to the template, where the phrases are associated with the transmission information.

9.   (Original): The system according to claim 8, wherein the phrases are associated with artist information in the transmission information.

10.   (Original): The system according to claim 8, further comprising an input device, wherein the phrases are user definable via the input device.

11.   (Previously Presented): The system according to claim 23, further comprising an audio summer configured to combine the message with a music signal.

12.   (Cancelled).

13.   (Previously Presented): The method according to claim 24, wherein the template is selected randomly.

-3-

14. (Previously Presented): The method according to claim 24, wherein the template is selected from the plurality of predefined templates based on a counter.

15. (Previously Presented): The method according to claim 24, wherein the template is selected from the plurality of predefined templates based on the transmission information.

16. (Original): The method according to claim 15, wherein the template is selected from the plurality of predefined templates based on an artist associated with the transmission.

17. (Previously Presented): The method according to claim 24, further comprising determining if artist information contained within the transmission information is plural.

18. (Previously Presented): The method according to claim 24, wherein the transmission information includes next up information and the template is selected based on the next up information.

19. (Previously Presented): The method according to claim 24, further comprising adding phrases to the template, where the phrases are associated with the transmission information.

-4-

20.   (Original): The method according to claim 19, wherein the phrases are associated with artist information contained within the transmission information.

21.   (Original): The method according to claim 20, further comprising entering the phrases to be added to the template.

22.   (Previously Presented): The method according to claim 24, further comprising summing the message with a corresponding music signal.

23.   (Currently Amended): A system for generating an information announcement, the system comprising:

        a receiver to receive broadcast programming transmission information;

        a text-to-speech generator in communication with the receiver, the text-to-speech generator being configured to receive transmission information from the receiver, select a template from a plurality of predefined templates, and insert portions of the transmission information into the template creating a message; and

        wherein the template includes a phrase and the portions of the transmission information are inserted into the phrase.

24.   (Currently Amended):   A method for generating an information announcement, the method comprising:

receiving <u>broadcast programming</u> transmission information;

selecting a template from a plurality of predefined templates;

creating a message by inserting portions of the transmission information into the templates;

audibly communicating the message to a user; and

wherein the template includes a phrase and the portions of the transmission information are inserted into the phrase.
